

# Information Retrieval on the JAMA website

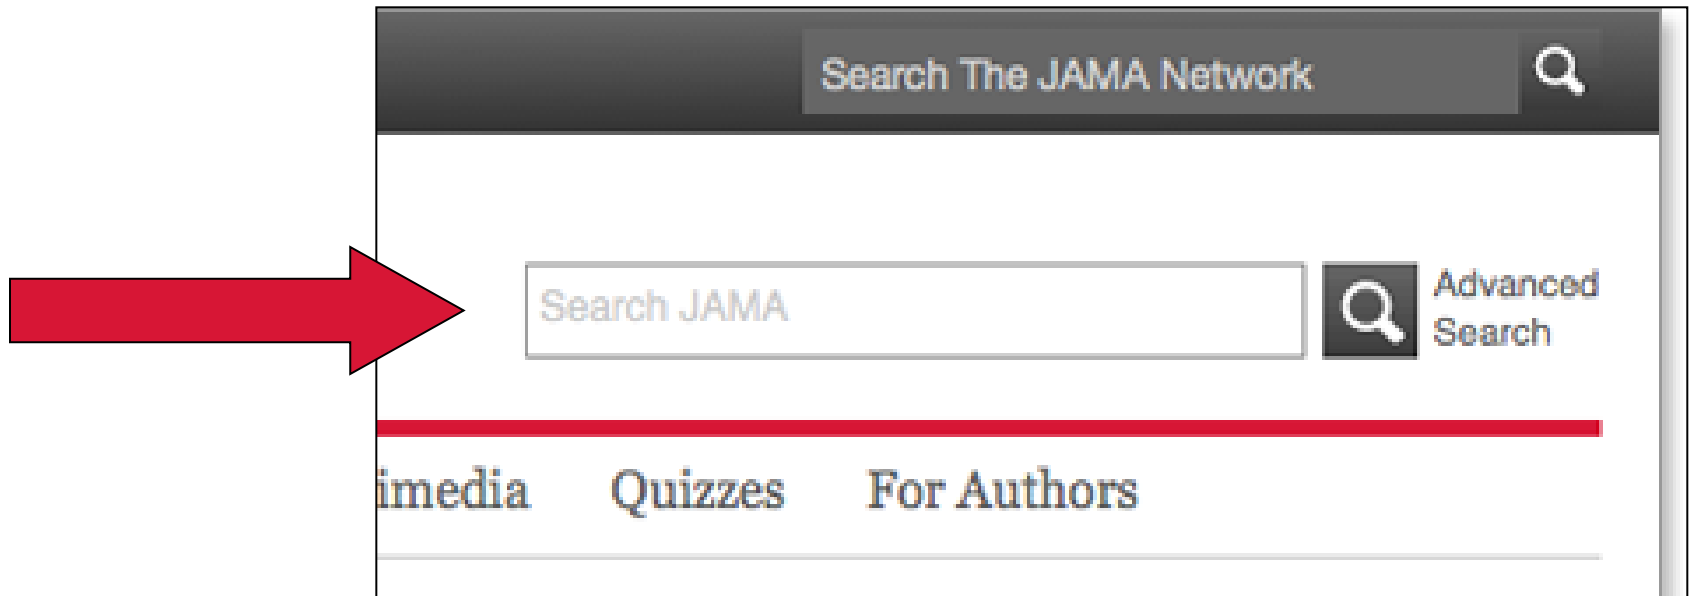

# The new JAMA website

The screenshot displays the JAMA website interface. At the top, there is a navigation bar with 'The JAMA Network' and links for 'Journals', 'Specialties & Topics', 'Store', and 'Physician Jobs'. A search bar is located on the right side of this bar. Below the navigation bar, the JAMA logo is prominently displayed, along with the text 'The Journal of the American Medical Association'. A secondary navigation menu includes 'Home', 'Current Issue', 'All Issues', 'Online First', 'Specialties & Topics', 'CME', 'Multimedia', 'Quizzes', 'For Authors', and 'Store'. The main content area is divided into several sections: 'Current Issue' (January 16, 2013, Vol 309, No. 3) with a 'Table of Contents' and 'This Week in JAMA' link; 'Current Issue Highlights' featuring 'Bacterial Coinfection in Influenza' with a detailed description and a 'CME Article' image; 'Online First' articles including 'Influenza Prevention Update', 'US Health Disadvantage Relative to Other High-Income Countries', 'Curbing Gun Violence', and 'Silencing the Science on Gun Research'; 'Featured Topic' on 'Physical Activity'; and 'Multimedia' with an 'Author Interview' section. A sign-in form for a personal account is also visible on the left side.

# Search Tools - Always Accessible

The screenshot shows the JAMA Network website interface. At the top right, there is a search bar labeled "Search The JAMA Network" with a magnifying glass icon. Below this, the main header includes the JAMA logo and "The Journal of the American Medical Association". A navigation menu contains links for Home, Current Issue, All Issues, Online First, Specialties & Topics, Multimedia, Quizzes, For Authors, and Store. A large red arrow points from the center of the page towards the search bar. Below the navigation, there are sections for "Current Issue" (January 16, 2013), "Table of Contents", "This Week in JAMA", and "JAMA Editor's Audio Summary". A featured article titled "Bacterial Coinfection in Influenza" is highlighted, with a sub-section for "Online First" containing articles like "Influenza Prevention Update" and "US Health Disadvantage Relative to Other High-Income Countries". At the bottom, there is an "Advertisement" for ISENTRESS and an "Author Interview" section.

How best to treat posttraumatic stress disorder (PTSD) is a long-standing question. Treatments for PTSD, which began in the late 19th century, have varied greatly.<sup>1</sup> In the current era, numerous PTSD treatments are available, some with a strong evidence base.<sup>2</sup> In this issue of *JAMA*, the findings of 2 randomized controlled trials of interventions for PTSD expand the boundaries of treatment to relatively underserved populations: the trial by Mills et al<sup>3</sup> assesses interventions in persons with PTSD and substance dependence, and the trial by Monson et al<sup>4</sup> assesses interventions in couples in which 1 partner has PTSD.<sup>4</sup>

The trial by Mills et al<sup>3</sup> evaluated Concurrent Treatment of PTSD and Substance Use Disorders Using Prolonged Exposure (COPE) plus usual treatment for substance dependence (n = 55) vs usual treatment for substance dependence alone (n = 48). COPE involved an individual modality treatment totaling 19.5 hours, whereas usual treatment was any type of substance use treatment available in the patient's community, including counseling, detoxification, residential rehabilitation, and pharmacotherapy. Prolonged exposure therapy is a type of cognitive-behavioral therapy that exposes patients to memories and reminders of traumatic events associated with intense negative emotions such as anxiety, anger, and sadness. Although this is the first published randomized controlled trial using prolonged exposure in patients with PTSD and substance use disorder, trials of other models for concurrent treatment of PTSD and substance use disorders have shown positive findings.<sup>5</sup> Prolonged exposure therapy is an evidence-based treatment for PTSD currently being implemented on a large scale within the US Veterans Affairs Healthcare System<sup>6</sup>; thus, results of this trial of prolonged exposure for co-occurring PTSD and substance dependence are of immediate
